EDUCATION

Georgia Institute of Technology

May 2026 (Expected)

Bachelor of Science in Computer Science, Minor in Financial Technology (FinTech)

Atlanta, GA

Coursework: Intro to OOP (Java), Data Structures and Algorithms (Java), Computer Hardware and Machine Language (C /Assembly), Computer Systems and Networks (C), Machine Learning, Intro to AI (Python), Database Systems (SQL)

EXPERIENCE

Societe Generale

June 2025 - August 2025

Incoming Software Engineer Intern

New York City, NY

- Global Banking and Technology Operations

Georgia Tech College of Computing

August 2024 - Present

Undergraduate Teaching Assistant: CS 2200 Systems and Networks

Atlanta, GA

- Providing professional instruction for computer system architecture - including parallel systems, multithreading, memory management, processor scheduling, caching and networking in a lab setting
- Designing curriculum through homeworks, projects, and tests to reinforce key concepts
- Collaborating with other instructors to provide tutoring during office hours for over 500 students

Infor

May 2024 - August 2024

Software Development Intern

Atlanta, GA

- Integrated computer vision functionality to existing RPA product using python & .NET framework, enabling automated interaction with screen UI elements on remote desktop environments
- Trained & deployed machine learning model that utilizes dataset of web & desktop UI images
- Enhanced automated testing by integrating Testcontainers with Spring Boot, allowing use of test data & databases in pipelines for realistic test environment configuration

Georgia Tech Financial Services Lab

August 2023 - May 2024

Undergraduate Researcher

Atlanta, GA

- Applied fundamental analysis, logistic regression, & classifiers for a profitable trading bot
- Used pandas, matplotlib, & scikit-learn to develop a ML pipeline that takes in company financial data
- Analyzed data & developed models (time series, gradient boosting (R^2 of .8722), random forest, decision tree (R^2 of .8283), and logistic regression) that predict movement of company stocks

PROJECTS

Predicting Outcomes of Class Action Lawsuits: Sentiment Analysis

January 2024 - May 2024

- Explored class action lawsuit outcomes by analyzing Non-GAAP measures in company financial reports
- Identified correlation between related sentiment changes of SEC filings & lawsuit outcomes

Design Oriented Airplane Management System

May 2023 - August 2023

- Created an airline management system through Java that can be used to track the overall status of client based commercial aircrafts across a region with multiple airports
- Utilized unified process, & design patterns such as GRASP & SOLID to optimize implementation

SKILLS

Technical: Java • Python • C# • C • Javascript • SQL

Libraries: pandas • matplotlib • numpy • seaborn • scikit-learn • opencv • pytesseract

Project Management: Agile • Scrum • Unified Process • Jira • Gitlab

Student Activities:
